About | Full Stack Developer, Open Source Maintainer, Computer Science student, and Competitive Programmer.

Skills

Languages Portuguese (Native), English (Fluent)
Programming Rust, JavaScript/TypeScript, C++ , Python, SQL, Bash
Frameworks React, Next.js, TanStack, Vue.js, Nuxt
Operating Systems Arch Linux, Ubuntu, Linux Mint
Tools Git, GitHub Actions, Docker, Docker Compose, Supabase, Firebase, Vim

Experience

Junior Developer – Difrisul Distribuidora Chapecó Feb 2025 – Jul 2026
– Designed and developed an ERP for the company's internal operations, covering product purchasing and sales, price table simulation and generation, route, customer, and employee management, route scheduling and planning, delivery receipt and return tracking, operational reports and KPIs, an external API for system integrations, supplier portals, and a Kanban board for order management.
– Developed an e-commerce application for the company using Next.js, Supabase, Medusa.js, shadcn/ui, Tailwind CSS v4, and the Mercado Pago SDK. Also began development of a mobile application integrated with the platform.
– Developed a Python script for consolidating delivery routes from Excel files, packaged as a Windows executable.
– Developed a Python script for filtering and validating phone numbers from Excel files, packaged as a Windows executable.

Junior Developer – Weplan Móveis Planejados Aug 2023 – Feb 2025
– Developed updates for the company's production website, modernizing its design and content.
– Upgraded the website's entire technology stack, including a migration from Vue 2 to Nuxt 3.
– Developed a new company website from scratch using Tailwind CSS and Nuxt 3.
– Implemented numerous features and business rules for the company's internal contract calculation and generation system, including cross-page state persistence, reverse calculations from a final price, data validation, and support for multiple environments within a single contract.
– Reverse-engineered artifacts generated by the PROMOB CAD software to extract data directly from the resulting XML, while also implementing PDF concatenation, fixing numerous logical errors, and achieving an approximately 10x improvement in contract generation time.
– Upgraded the internal tool's entire technology stack, including a migration from Vue 2 to Nuxt 3, a newer version of Vuetify, and updates to the Firebase development libraries.

Activities

Competitive Programming 2023 – Present
– ICPC Programming Contest: Bronze Medal in Chapecó (2023–2024), Bronze Medal in Passo Fundo (2024–2025), Silver Medal in Chapecó (2025–2026), and Gold Medal in Pinhalzinho (2026–2027).
– Desbravalley Chapecó: 1st place (2023), 3rd place (2024), and 2nd place (2025).

Teaching Assistant Aug 2025 – Dec 2025
– Programming Algorithms (2025.2)
– Data Structures (2025.2)

Education

Federal University of Fronteira Sul 2021 – 2026
B.Sc. in Computer Science – Final Semester

Recent Projects

Rumqttc-next [Link](#)
– Full-featured MQTT client library based on a fork created after the original company discontinued open development of the project.
– Written in Rust using the Tokio runtime and Flume for MPSC communication.
– Widely used project with more than 250,000 downloads.

Grok & Z.ai Scraper [Grok / Z.ai](#)
– Lightweight scrapers for grok.com and chat.z.ai.
– Originally developed in Python and later migrated to TypeScript.

Image Tagger [Link](#)
– Tool for generating image tag lists with support for four computer vision models.
– Originally developed in Python and later migrated to TypeScript.
